Creatext is a young artificial intelligence startup. Our mission is to fill the gap between state-of-the-art natural language processing (NLP) research and business applications by building customized NLP solutions for companies.

We are looking for passionate, ambitious, and self-reliant interns. You will get the opportunity to experience a fast-paced and rapidly-changing startup environment, shaping how our NLP models are used in production and delivering tangible business value.

_tasks for interns_

We’re a startup, so you’ll have to be comfortable rolling up your sleeves to support our mission. As Full stack Developer Intern, you are at the epicenter of our tech stack, supporting NLP engineers to take their models from prototype to production and allowing users to engage with these models by creating fun-to-use web apps.

_major requirements_

- Production-level coding experience in Python and/or JavaScript
- Knowledge of Git, NoSQL databases, and test-driven development
- Familiarity with deploying machine learning models in a cloud environment like AWS or GCP is a plus

_expected preparation_

Thorough Python and/or JavaScript skills are essential for this internship. Based on your level, we can design a custom training program to prepare you for the internship.

Please note that this project description is subject to change.

For more information on the Humboldt Internship Program, please visit the webpage or contact the program coordinator (internship.program@hu-berlin.de).

If more than one option is given, the specification is made in consultation with the project supervisor and the responsible program coordinator under consideration of the applicant's conditions.

Implementing organization is the International Department of Humboldt-Universität zu Berlin.
